## Campbell Tract Bridge Extension and Riparian Restoration

### Need

This project will address severe stream bank erosion impacting a trail connecting bridge over a salmon-spawning creek. If left unchecked, further erosion can result in undermining one of the bridge abutments. The Campbell Tract Loop National Recreation Trail and connecting trails provide multiple use recreation opportunities attracting nearly 120,000 users annually. Year-round trail activities include hiking, jogging, skiing and skijoring, snowshoeing, mountain biking, geocaching, horseback riding and dog sledding.

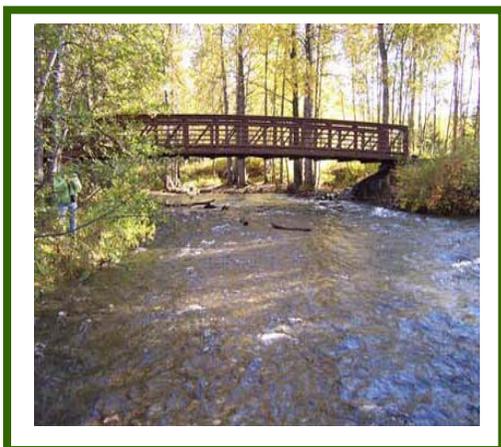

### Recovery Act Funding

Funding will support a contract to produce and install a longer bridge to span the natural floodplain of the creek. Stream bank restoration will also be performed.

### Benefits

The overall project goal is to maintain and enhance access and public safety to one of BLM's most visited recreation sites within Anchorage Alaska. The project will also decrease future maintenance costs to the site, ensure a free flowing waterway, and allow for a more natural ecological process to occur once the riparian habitat is reestablished.
